Hi Kate,

Thanks for sharing these with me. Your responses are beautifully done – very clear and sound. I had a few comments on the comment summaries but not on the comment responses, as shown in the attached version.

Thanks.

Amy

Subject: MON draft RTC on EtO dose-response model

Hi Amy,

For your review, attached is the draft response to comments on the EtO dose-response model. I appreciate your feedback before I send this to Paul to check it for accuracy. The “general comments” response (#5) comprises material that Paul had already suggested we use in the counterpoints document.

Note, this is the detailed version of RTCs on the dose-response model that I prepared last week.

Thanks,
Kate
